

EngiSense AI — Engineering Test Documentation

Synthetic software-validation documentation for testing document upload, chunking, embeddings, retrieval, and RAG. Not for real operational use.

Engineering Limits

Parameter	Normal	Warning	Critical
Temperature	20–42 °C	>42 °C	≥50 °C
Voltage	11.5–12.5 V	<11.5 or >12.5 V	<10.5 or >13.5 V
Current	1.5–4.5 A	>4.5 A	≥5.0 A
Vibration	0–6.0 mm/s RMS	>6.0 mm/s	≥10.0 mm/s
Pressure	0.8–1.5 bar	<0.8 or >1.5 bar	<0.5 or >2.0 bar

Dataset Test Case

Cycle 30 contains an intentional vibration spike of 12.5 mm/s RMS. Values above 6.0 mm/s are a warning condition and values at or above 10.0 mm/s are a critical condition.

The dataset also contains increasing temperature and current values near the end of the sequence to exercise data-aware retrieval.
